ABOUT US

RICH EXPERIENCE – SINCE 1977

The beginnings of the company go back to 1977, when Tadeusz and Danuta Smołeccy opened a family company called DonKwiat in the town of Podlesie. The initial modest offer, thanks to the continuation of the family tradition, has grown to its present size. In addition to popular and proven designs, we also focus on innovation. We introduce competitive, new products that meet the demand shaped by the market.

STRATEGY

DonKwiat is not only production, it is a team created by people who are motivated by development – the company has evolved from a small enterprise into a brand that is characterized by innovation and quality. We are introducing increasing newer technologies and solutions. With our actions, we implement the Long-Term Enterprise Development Strategy developed in 2016. We carry out projects based on the developed design strategy, which allows us to implement new products on the market.

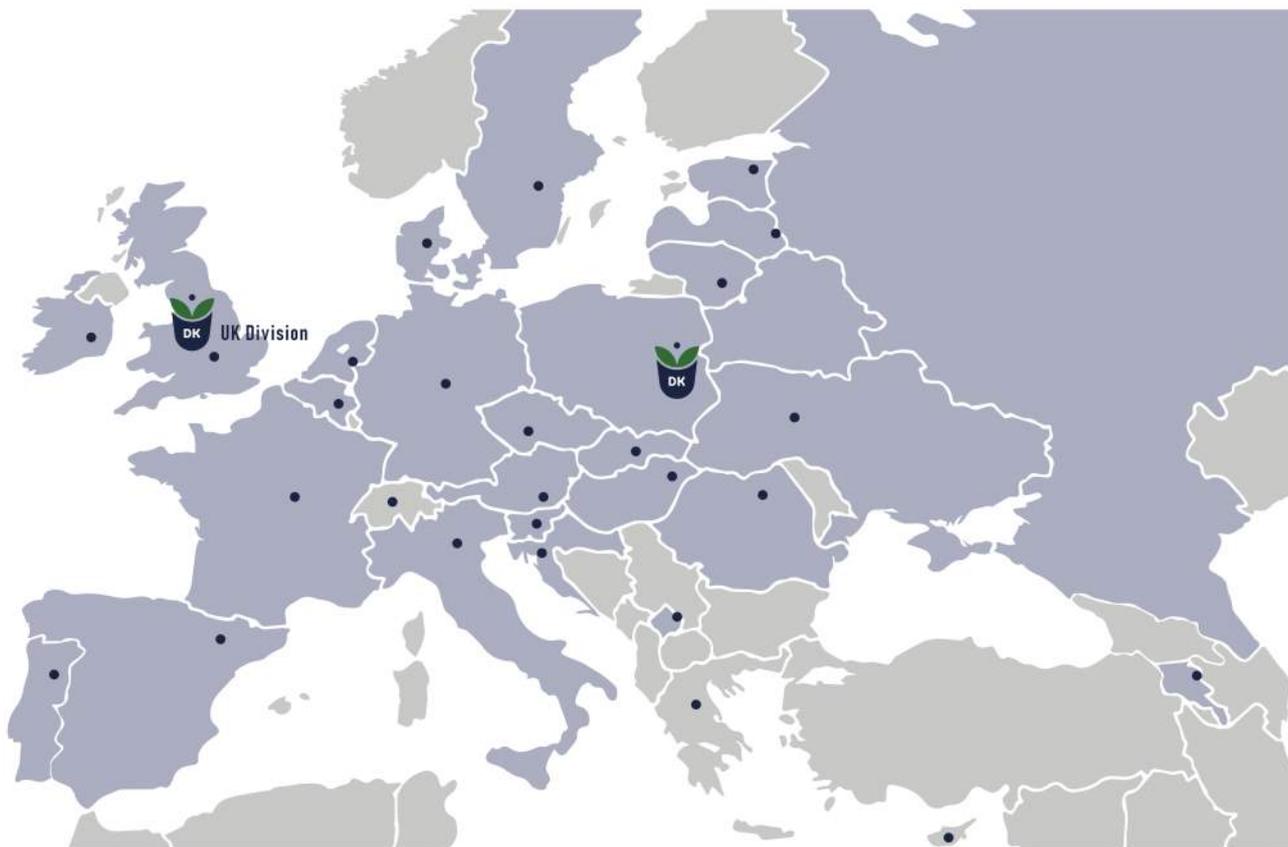

WE PRODUCE FOR:

- professionals involved in the cultivation of plants professionally;
- enthusiasts who love nature and their work with plants;
- economical and practical people who use reuse flowerpots;
- people who respect their time and appreciate the uninterrupted work of flowerpots.

WE EXPORT TO MANY EUROPEAN AND NON-EUROPEAN MARKETS

Our products are of great interest to nurserymen and gardeners – they are willingly used in many nurseries and horticultural farms, both on the domestic and foreign market.

The DonKwiat brand is recognized and appreciated in many European countries, including: Czech Republic, Slovakia, Netherlands, Germany, UK. We also export outside Europe, e.g. to New Zealand and Armenia.

We act locally and supply globally

OFFER

We offer products of various capacities, sizes and forms (round, square and bowl flowerpots). The flowerpots are intended for planting flowers, decorative plants and trees, shrubs, fruit trees as well as some vegetables and fruits. Products offered by DonKwiat are suitable for both manual and mechanised planting (where automatic feeders are used). We care for the highest quality of materials which ensures that they are resistant to unfavourable weather conditions.

WE WORK WITH DESIGNERS

Our offer includes products, among others, designed by KABO & PYDO - an interdisciplinary design studio. The products developed especially for DonKwiat have been preceded by a design audit and have been created on the basis of user research, thanks to which they fully meet market needs. We provide you with innovative production and decorative flowerpots as well as transport trays which have been designed and manufactured in Poland with attention to the smallest detail.

CHECK US OUT!

We ensure competitive prices for flowerpots and efficient realisation of orders. We offer discounts, determined individually depending on the size of the order. For larger orders we offer free transport, we send smaller quantities by courier.

We sell over 50,000,000 flowerpots annually. Every client is important to us and we treat each client individually. We have been trusted by over 500 clients from many countries, and this number is constantly growing. See for yourself the quality of DonKwiat products by choosing from among 140 offered models.

**FAST
DELIVERY**

We deliver the ordered goods by freight forwarding or our own transport within 2-5 working days from the order.

**GOODS
GUARANTEE**

Buying from us, you have a guarantee of quality - if the product does not meet your expectations, you can exchange it.

**ORDERS
24H**

You are invited to place orders electronically via e-mail or through our online shop.

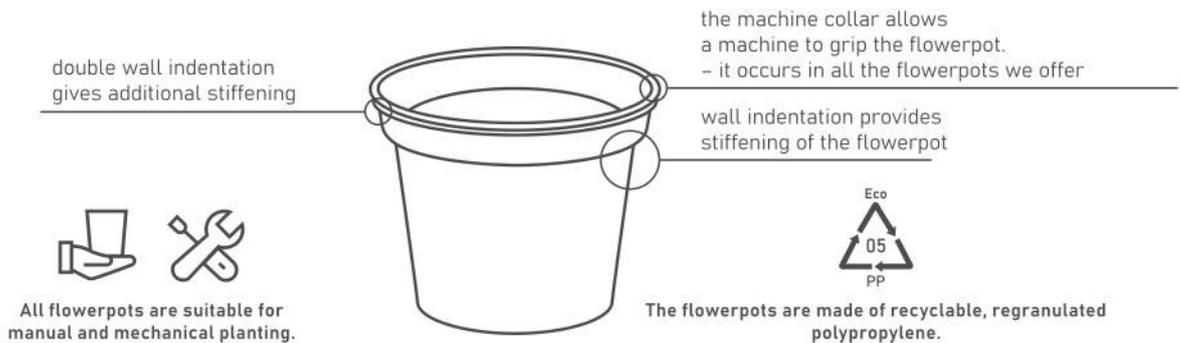

**WIDE
ASSORTMENT**

Over 140 models of different types/kinds of flowerpots adapted to suit every client, even the most demanding.

TROUBLE-FREE MACHINE PLANTING AND OPTIMAL STACKING

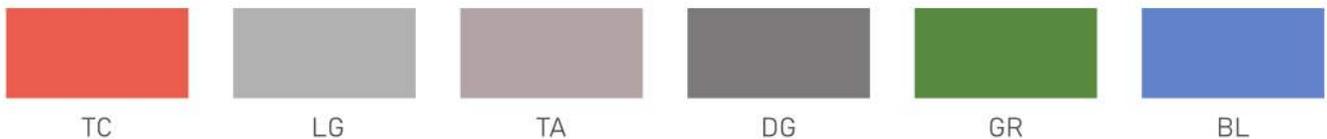

ADDITIONAL SERVICES

In order to meet our clients' expectations, we offer a range of additional services to customise the flowerpots you order. These services are offered on special request for orders of full pallets of products, and the fulfilment of the order depends on its size. Due to production requirements, lead times may be extended by 1-2 months. Please contact us directly if you are interested in these services. We believe that we can meet all your requirements.

REGANULATE FLOWERPOTS

We offer the possibility to order flowerpots made of regranulate, a 100% recycled material. Choosing this option supports recycling and environmental protection. Available colours: terracotta, light grey, dark grey, taupe, green, blue.

COLOURED FLOWERPOTS

The flowerpots can be manufactured in any colour from the original PP granulate. The minimum order for flowerpots in colours is 4 pallets of one type.

LABELLING OF FLOWERPOTS:

IN THE FORM OF STICKERS WITH BARCODES.

The service of automatic labelling of flowerpots with barcode stickers and descriptions. The maximum size of the stickers is 5 x 5 cm. It is possible to order barcodes directly in the DonKwiat company.

Flowerpot production

STANDARD SQUARE FLOWERPOTS

S

Their construction ensures the easy and economical positioning of plants. The product line marked with the A symbol has spaces for 3 and 4 cm wide labels. The shape of the flowerpots allows for both traditional and machine use.

Specialised
flowerpots
dedicated
to cultivating
specific plants

The RSB flowerpot was designed in close cooperation with one of the largest producers of American blueberries in Poland.

The blueberry or raspberry flowerpot is designed especially with the needs of this plant in mind. The raised bottom with a large number of holes and high side holes prevent excessive moisture on the bottom and ensure optimal air circulation, so the roots are properly aerated. In addition, the elevation protects the plant from ground frost. The dome shape improves the strength of the container. The side holes drain water so it does not collect at the bottom of the flowerpot. The wide collar, in turn, allows conveniently moving the container.

FLOWERPOTS FOR CULTIVATING PLANTS IN THE GROUND

RSC

Flowerpots with increased strength. The use of thicker walls compared to standard flowerpots and the addition of flexible LDPE material has made it possible to create products resistant to adverse weather conditions.

The innovative conifer flowerpots have holes in the entire side surface. The flowerpot can be dug into the ground, and thanks to the holes, the plant has unlimited access to nutrients contained in the soil, which contributes to its healthy growth. The thin roots of a buried plant can grow outside of the flowerpot and draw nutrients directly from the soil. When cultivating above ground, the roots have free access to air. The bottom with the holes is raised, which facilitates aeration of the roots from below. The side holes drain water so that it does not collect at the bottom of the flowerpot. The wide collar, in turn, allows conveniently moving the container.

F

FLOWERPOTS FOR CULTIVATING STRAWBERRIES AND RASPBERRIES

The flowerpots with feet are intended, among others, for hydroponic cultivation in rain gutters. This type of product is also recommended for outdoor plantations, e.g. for increased aeration of plant roots. They are used in the cultivation of soft fruits, especially strawberries. The flowerpots are stackable.
